

# Scientific Computing Group

## Programming with Python:

### Read Measurements Project, Refactoring

```
# Write Fibonacci series up to n
>>> def fib(n):
>>>     a, b = 0, 1
>>>     while a < n:
>>>         print(a, end=' ')
>>>         a, b = b, a+b
>>>     print()
>>> fib(1000)
0 1 1 2 3 5 8 13 21 34 55 89 144 233 377 610
```

Jeremiah Lant, Hydrologist

# Review of notes and questions from last meeting

- Last meeting - refactored script into a module by creating small functions that handle the various processing functionalities required in processing a sample measurements file.
- <https://github.com/jlant-usgs/scientific-computing-group>

# Today's Objectives

1. Refactor the `read_measurements.py` file to dynamically handle any order, number, or set of parameters in a measurements data file.

# Add ability to handle any **order**, number, or set of parameters

2014\_measurements\_bob.txt

date	discharge (cfs)	stage (ft)	temperature (celsius)
01/05/2014	100	12.2	5
02/08/2014	110	12.8	3
03/07/2014	105	12.5	10
04/01/2014	98	11.9	20
05/04/2014	92	11.5	25
06/01/2014	104	12.3	28
07/02/2014	97	11.8	32
08/03/2014	95	11.7	33
09/04/2014	96	11.7	27
10/05/2014	101	12.0	20
11/02/2014	112	13.2	15
12/03/2014	109	12.8	7

2014\_measurements\_alex.txt

date	stage (ft)	temperature (celsius)	discharge (cfs)
1/26/2014	12.9	6	105
2/24/2014	13.6	4	113
3/27/2014	13.3	11	108
4/21/2014	12.6	20	103
5/24/2014	12.0	25	97
6/21/2014	12.8	28	107
7/23/2014	12.4	32	98
8/28/2014	11.9	34	99
9/24/2014	11.9	27	101
10/23/2014	12.7	20	106
11/22/2014	13.4	16	115
12/28/2014	13.7	8	111

Currently, read\_measurements.py can not read and process this file which has a different **order**.

# Add ability to handle any order, **number**, or set of parameters

2014\_measurements\_bob.txt

12/15/2014	9.7	1.2

Currently, read\_measurements.py can not read and process this file which has a different **set**.

# Next Meeting

- Refactor read\_measurements.py with numpy arrays
- Plot data with matplotlib
